KEY FEATURES

ERGOFLEX SEATING SYSTEM™

Backrest flexes with you through the paddling stroke for optimal support. You can adjust its height to fit your position. EVA padded seat eliminates hot spots and supports your thighs on even the longest trips.

FLUID STEERING SYSTEM™ RUDDER

Keeps you on course during challenging maneuvers and strong crosswinds. Stiff, yet light, composite construction adds precision.

SCOTTY™ SWIVEL ROD HOLDER

This Scotty™ bait caster rod holder is a great way to secure and protect your rod and reel. It holds a bait caster reel in a cushioned cradle. Standard on all Elie fishing kayaks.

QUICK LOCK HATCH

Stow and retrieve your essentials in a flash with the easy-access quick lock hatch. A simple quarter turn of the latches opens and closes the water resistant hatch, protecting your belongings.

COCKPIT TABLE

A great place to keep important items secure and within reach. The watertight day hatch and dry bag keep valuables dry and safe. Plus, the console doubles as a lip for a spray skirt.

HIGH EFFICIENCY TWIN SHEET THERMOFORMING

THERE ARE TWO MAIN PROCESSES USED IN THE CONSTRUCTION OF POLYETHYLENE BOATS: ROTATIONAL MOLDING (ROTOMOLDING) AND THERMOFORMING. ELIE USES TWIN SHEET THERMOFORMING (TST), A HIGH PRECISION TECHNOLOGY THAT SHAPES THE DECK AND HULL AND FUSES THEM TOGETHER UNDER EXTREME HEAT AND PRESSURE. ONCE THE TWO ARE FUSED, THEY ARE INSEPARABLE. THE PARTING SEAM IS PERFECTLY WATERTIGHT.

ELIE'S HIGH MOLECULAR WEIGHT PLASTIC AND THE TST MANUFACTURING PROCESS RESULT IN A LIGHTWEIGHT PRODUCT THAT HAS UNPARALLELED RIGIDITY, EXCEPTIONAL IMPACT AND BREAKAGE RESISTANCE, OUTSTANDING LONGEVITY AND SUPERIOR SAFETY.

WE CARE ABOUT THE ENVIRONMENT

WE RECYCLE 99.5% OF THE PLASTIC WASTE GENERATED DURING THE MANUFACTURING PROCESS. OUR SPECIALLY DESIGNED AIR DUCTS REDIRECT HEAT RELEASED BY THE OVENS DURING THE MOLDING PROCESS IN ORDER TO HEAT THE FACTORY DURING THE WINTER MONTHS.
